Re: Request for Airport Location Review
Municipal Solid Waste Registration Application
Terrabon, Inc. – Type V Facility
Brazos County, Texas

Dear Ms. Bruner:

RPS on behalf of Terrabon, Inc. (Terrabon) is in the process of preparing a registration application for a municipal solid waste (MSW) Type V facility associated with a proposed MSW to energy production facility. Please note that the proposed facility is being classified as a Type V facility for waste processing and not a landfill for waste disposal. The application will be submitted to the Texas Commission on Environmental Quality (TCEQ). Per TCEQ requirements found in 30 TAC 330.61(i), this letter of coordination is being submitted to request a review by the Federal Aviation Administration (FAA) of compliance with airport location restrictions for the 10-acre site located in Bryan, Texas.

To facilitate your review, I have provided several supporting attachments (e.g., location map, layout drawing, etc.) that describe the location of the facility and proposed operations. Also, the following may be pertinent to your review:

- Waste processing activities will be conducted within enclosed buildings that prevents access to birds;
- Geographical coordinates for the site are 30.71476° N and -96.43130° W; and
- As reflected on location maps, Easterwood Airport in College Station, TX is approximately nine miles to the south southeast, and Coulter Field in Bryan, TX is approximately four miles east of the facility.

If I may provide additional supporting information and/or documentation to assist in your review, please call me at (512) 347-7588.

Sincerely,

RPS

Kyle Shelton, P.E.
